

Louvres - Vents - Louvred Doors

Leading Louvre Manufacturer

Alu+ is a Louvre manufacturer specialising in natural ventilation products for the building industry. Known for our bespoke, easy to install systems we are one of the UK's market leaders for Louvre products.

We are recognised by architects and designers for creating new and innovative Louvre and window ventilation systems.

Our products have been developed to give choice, individuality and practicality. We use a number of innovative design concepts and features to dramatically lift water and air resistance, increase strength and improve ease of operation.

We endeavour to return all quotes within 24 hours and our current lead time for RAL paint finished Louvres is just 5 working days.

We are unique in having the capability to produce **Round Louvres** like this one. **Arched Louvres** and **Triangular Louvres** are also possible

Our Products

Continuous Louvre Systems

The ALU+ range offers architects the means of enclosing space with **greater flexibility in both appearance and performance.**

Made from extruded aluminium for greater strength and accuracy, our unique offering of ingenious aluminium clips, fixing and support systems give flexibility and seamless integration into all types of buildings. A full suite of **optional accessories** is offered, including bird guards, insect mesh, single and double leaf louvre doors, perimeter flashings etc

A range of concealed supporting mullions ensures that materials are used economically while meeting **client-specific requirements.**

Louvres

The basic requirement for a louvre is **to move air in and around a building**, thereby creating added comfort and convenience for better living. ALU+ louvres come in various blade types and numerous frame choices that allow their use as an integral part of a window system or separately as a stand-alone louvre.

Blades and frame are made from extruded aluminium for **greater strength and accuracy.**

The system is ingeniously designed for **simple self-assembly from standard bar length profiles.**

Our Louvres come in a variety of shapes and sizes. We don't just make **Rectangular Louvres**. We also manufacture **Circular, Arched, Trapezoidal and Triangular** louvres.

Window Ventilation

The logical consequence of seamless method of construction and airtight windows to avoid unnecessary heat loss is that the vital exchange of air is not always guaranteed.

Inadequate ventilation may create unhygienic living conditions (carbon dioxide, water vapour, odours from building materials, people, etc.).

The ALU+ range of window ventilation systems offers occupants **the required constant-flow ventilation**.

Sun Shading

People respond better when they have a nice, unobstructed view to the outside and work better under controlled natural daylight conditions. Architects, for their part, naturally like to create buildings that evoke interest and admiration.

Furthermore, sun protection products **minimize solar heat gain within the building and provide control of both incident light and glare**. The ALU+ range of sun protection systems achieves the necessary functional performance, thereby creating **a better environment to live in**. They also meet the general aesthetic requirements of the building.

ALU+ offers a choice of systems consisting of aluminium sun-shading components, both in horizontal and in vertical configurations.
